It turns it into an international airport, an affordable business hub, a land-  
a user-friendly aviation facility and **a gold mine for dev**

## AT LEAST THAT'S WHAT WE

# WITH A 12,370-FOOT RUNWAY, WE'VE GOT A LOT TO WORK WITH.

Considering the fact that it could be an alternate landing site for  
NASA's Space Shuttle, we don't imagine that there are too many types  
of aircraft existing or contemplated that we can't handle.

## AT SAWYER, YOUR BUSINESS IS CLEARED FOR IMMEDIATE TAKEOFF.

The Airport's Master Plan centers on continued growth and development of the former K.I. Sawyer Air Force Base as a true multi-modal transportation center.

Ideally positioned for aircraft Maintenance, Repair, and Overhaul (MRO), we are home to one of two major aircraft MRO centers for American Eagle Airlines.

While large hub airports in congested urban areas continue to experience growth, the result is increased delays to aircraft operators, resulting in significantly increased costs and fuel burn. And, while increases in passengers and air cargo traffic strain the capacity of most airports, Sawyer is at the crossroads of international air transportation and is specifically designed to serve a global economy.

Land-rich... (with over 5,000 acres of airfield, industrial park and adjacent residential areas) and easy access to rail, road and port facilities, this region boasts a dynamic and diverse economic climate with local and state governments that are pro-business, working together as one development entity.

Marquette County is a regional center for health-care, and with Northern Michigan University serving as America's first laptop university, NMU provides over 100 degree programs including a highly successful Aviation Maintenance Technology program with both an Associates and Certified A&P Program.
