

Sawyer ARFF

FAA Certified Class I Airport with Index B Firefighting Capability. However, when combining the capability of the two ARFF vehicles we have the capability to provide ARFF coverage in excess of Index D when the need arises.

Staffing

Sawyer has a Training Officer/Fire Chief and 10 Airport firefighters that are trained to FAA Part 139 standards. Minimum staffing requires one ARFF trained Firefighter, but we try to have two firefighters during most shifts.

Firefighting Equipment

ARFF 1 – 1992 Oshkosh T-1500

1500 Gallons of Water

205 Gallons of AFFF

Capable of pumping 1,250 Gpm @ 250 psi

700 lb Dry Chemical (PKP) Firefighting System (Turret and Hand line)

Fully equipped with rescue and extrication equipment

ARFF 2 – 2008 Oshkosh Striker 3000

3,000 Gallons of water

420 Gallons of 3% AFFF Foam

Capable of Pumping at 1,950 Gpm @ 240 psi

460 lb Halotron (Halon Replacement) System (Handline)

Fully equipped with rescue and extrication equipment

There are over 1000 gallons of AFFF foam and 1100 lbs of Dry Chemical at the station to resupply our vehicles.

The Ramp is equipped with a fire hydrant system capable of delivering over 1900 gpm.

The Fire Station is located East of the center of the runway and can respond to either end of the runway in less than 3 minutes.
